

pH-Balanced Limonene Oil

Quantum Limonene Complex *pH-balanced, whole orange peel essential oil*

Available in ½ oz. or 2 oz.

**Rich in limonene, an extremely powerful monoterpene antioxidant,
uniquely extracted by a patented double-distillation process.**
Contains no harmful solvents, pesticides or chemicals.

When Do You Need pH-Balanced Limonene?

- To help loosen a stiff neck*
- To help promote clearer, smoother skin*
- To help diminish wrinkles and crows feet around the eyes*
- To help promote a more flexible spine*

Great For Skin

- Helps promote healthy and clear skin*
- Helps promote a beautiful, radiant complexion*
- Use full strength or dilute with water (50%) to achieve a milder solution

Great For Pain Relief

- Helps relieve tight, sore and painful muscles and joints, due to exercise*
- Also massage a few drops into bruised or stiff areas. (Do not apply to open cuts.)

Eight Chemicals In Skin & Hair Care Products You Should Never Use

Listed below are the 8 chemicals on the "most wanted" list -- the 8 chemicals we most want to see OFF labels of skin and hair care products. Avoid these harmful, toxic chemicals. It's time for first class, super healthy products: PREMIER SKIN AND HAIR CARE.

1. Propylene Glycol

This is a cheap, synthetic petrochemical used as a emulsifying base in creams and lotions to make the skin look smooth, but ultimately it ages the skin faster. The Material Safety Data Sheet tells you to avoid skin contact with it because it's a skin irritant! It can denature the skin's protein, leading to poor, saggy skin. It can be absorbed through your skin and potentially cause allergic reactions, and liver and kidney damage.

2. Sodium Lauryl Sulfate (SLS)

This harsh, caustic detergent is used because it's cheap and suds well. It's used as an engine degreaser and garage floor cleaner but you'll also find it in shampoo, soap, facial cleanser, etc. Research shows that SLS has a degenerative effect on the cell membranes and denatures protein such as in hair or skin. This can damage skin or hair, leading to aged skin and poor hair. SLS can corrode hair follicles and inhibit hair growth, contributing to hair loss.

SLS has the potential to cause cataracts (through skin absorption, even without direct eye contact). SLS can denature the protein of the eyes and delay the healing time of the eyes. From skin contact, SLS can be absorbed into your circulation and concentrate in your organs, such as your heart, liver or brain. This is potentially dangerous since SLS is a mutagen, capable of changing the information in the genetic material of your cell and organs.

3. Mineral Oil

This cheap, petroleum-based oil clogs the skin's pores and enlarges them, leading to poor, saggy skin. It decreases the ability of the skin cells to exchange nutrients and waste products. Those allergic to petroleum products may develop skin irritations.

4. Fragrance

When the word "fragrance," is listed on a label, it means a synthetic fragrance made in a test tube from any of over 200 synthetic chemicals. These "fragrance" chemicals, which can bio-accumulate in your organs, can cause many symptoms, such as headaches, lung problems, skin irritation, dizziness, memory impairment, rash, and more. They are very cheap, toxic imitations of real herbal scents.

5. Parabens (Propyl, Methyl, Butyl, or Ethyl)

These cheap preservatives are used to inhibit microbial growth in skin care or hair products even though they are known to be highly toxic. They have caused many allergic reactions and skin reactions.

6. Imidazolidinyl and Diazolidinyl Urea

These are the most commonly used preservatives after the parabens. They are an established cause of contact dermatitis (American Academy of Dermatology) and release formaldehyde (a toxic chemical).

7. Synthetic Colors

Synthetic colors are used in a skin cream or shampoo to make it colorful. Avoid them at all costs, along with hair dyes (with the exception of some henna products). They can cause allergy, skin and nerve problems. Synthetic colors are labeled as FD&C or D&C, followed by a number and color.

8. Triethanolamine (TEA)

Often used in the base of a product and to adjust the pH. TEA causes allergic reactions including eye problems, dryness of hair and skin, and can be toxic if absorbed into the body over time.

Quantum Limonene Complex

Contents

Contains 100% pure, pH-balanced orange peel extract concentrate, double-buffered with calcium, making it highly bioavailable. It contains a naturally-occurring high content of limonene, a potent, immune-boosting compound. Guaranteed free of benzene and other toxic chemicals. Cap tightly between uses to avoid evaporation of essential oils.

Recommended Use

Adults or children (age 4 and up): Massage a few drops of Premier Limonene Complex into the skin to help relieve tight or painful muscles and joints (especially after exercise) or bruises. Do not apply to open cuts. Use full strength or dilute with water (50%) to achieve a milder solution. Avoid contact with eyes or genitals. Do not use if allergic to oranges.
